KIRKMAN NURSERIES

For many years we have produced by far the greatest quantity of commercial varieties of deciduous fruit trees in the west. But we confine our propagation to standard proven varieties that we are willing to plant in our own orchards. Confusion to the customer is reduced by discarding all secondary and novelty varieties from our propagation for commercial plantings. If a variety is well worth growing—we propagate it—if not, and until new introductions are thoroughly tried out we do not offer them in the annual price list.

ALL VARIETIES OF ALL KINDS OF TREES AT ONE UNIFORM PRICE AS FOLLOWS:

One Year	300 or over	50 to 299	5 to 49	1 to 5
4 to 6 ft. (½ in. up)	**30c ea.**	40c ea.	50c ea.	60c ea.
3 to 4 ft. (3-8 to ½)	**25c ea.**	30c ea.	40c ea.	50c ea.
2 to 3 ft. (¼ to 3-8)	**20c ea.**	20c ea.	30c ea.	40c ea.

ALL VARIETIES LISTED IN APPROXIMATE ORDER OF RIPENING

APPLES on Apple Root (all one year trees): White Astrachan, Gravenstein, W. Banana, Delicious, Rome, Newtown, Winesap.

PEARS on French Root (all one year trees): Bartlett, Bosc, W. Nelis.

CHERRIES on Mazzard (all one year trees): Tartarian, Giant, R. Ann, Bing, Lambert.

PLUMS on Peach or Myro: (either one year or June buds): Beauty, Santa Rosa, Duarte, Satsuma, Wickson, Kelsey, European: Tragedy, President.

PRUNES on Peach or Myro: Sugar, Imperial, Robe, Burton, French.

ALMOND on Peach or Almond: (June buds or 1-year trees): Non Pareil, I.X.L., Long I. X. L., Ne Plus, Drake, Texas.

APRICOTS on Peach or Apricot: (June buds or 1-year trees): Newcastle, Royal, Blenheim, Tilton.

PEACHES (Either June bud or one year trees):
Drying—J. H. Hale, Elberta, Muir, Lovell.
Canning—Tuscan, Paloro, Peaks, Guame, Sims, Halford No. 2, Phillips, Dahling.
Shipping—Mayflower, Alexander, Hale's Early, St. John, Foster, J. H. Hale, Curry, Late Champion, Miller's Late.

FIGS (all one year trees): Kadota, Mission, Adriatic, Calimyrna, Stanford, Roeding Capri.

NECTARINES (June buds or one year trees): Early Rivers, Gower, Quetta, Humboldt, Lippiat, Stanwick.

GRAPES: Only raisin and shipping varieties: $40.00 per 1000 for No. 1; $25.00 per 1000 for No. 2.

JUNE BUD PRICES

Large June buds are conceded to be the most desirable grade of trees for orchard planting. Varieties and prices for June buds follow:

	1000 rate 300 or more	100 rate 50 to 299
Jumbo Grade (3 to 4 ft.)	30c	40c
No. 1 Grade (2 to 3 ft.)	25c	30c
No. 2 Grade (Under 2 ft.)	20c	20c

Small sizes—Prices on application.

ALMONDS—Non-Pareil, Drake, I. X. L., Ne-Plus, Peerless, Texas.

APRICOTS—Tilton, Blenheim, Royal.

PLUMS—Beauty, Climax, Santa Rosa, Duarte, Wickson, Kelsey.

PEACHES—Canning: Paloro, Peak, Guame, Sims, Phillips. Drying and Shipping: Elberta, J. H. Hale, Lovell, Mayflower, Red-Bird.

NECTARINES—Lippiats Orange, Humboldt, Early Rivers, Gower, Quetta, Stanwick.

Price List—1929 Season (Continued)

PROMISING NEW OR NOTEWORTHY VARIETIES FOR FREE TRIAL

What new inventions are to the mechanical industry, new varieties are to the horticultural world. Therein lies all hope of progress.

To promote and encourage such improvements each year during the month of February we send out whatever varieties are brought to our attention that seem promising as commercial varieties without charge except for transportation costs. There is no further obligation although we appreciate reports after they come into bearing.

We try to include an assortment that will be desirable from a home orchard standpoint so that they will come under the eyes of the owner frequently.

This year the following assortment includes an almond, a prune, a cherry, a nectarine, one white and one yellow fleshed freestone peach, and a canning clingstone peach.

NECTARINE: EARLY RIVERS. Ripens about ten days before Gower, our earliest variety at present; a freestone introduced from England, where it has become a leading variety. Seems extremely promising in all respects except that tree appears to be a slow grower.

Kirkman June Bud Almond trees, seed planted in February, 1928, budded in June, 1928, and photographed in November, 1928.

ALMOND: LONG I. X. L.: Similar to Non Pareil and more productive in the Oakley-Brentwood section, where it originated, than any of the standard varieties. Papershell.

PRUNE: BURTON: The most promising of the very large prunes introduced recently. Practically entire crop runs larger than 30 to the pound. Introduced by Mr. Burton, leading fruit grower and fruit breeder of Vacaville. He believes it will occupy a high place in California horticulture. Should be tested by every prune grower.

CHERRY: GIANT: Introduced by the late Luther Burbank and heralded by him as follows: "One of the most productive of all cherries and no other surpasses it in size or quality. In any series of five years, it will produce several times as much fruit as will the Bing or Lambert." Resistant to cracking and brown rot and therefore extremely promising for coast conditions where losses with Bing and Lambert are frequent from these causes.

PEACHES: LATE CHAMPION: Introduced from New Zealand by the U. S. D. A. A. Yellow freestone ripening with or a few days after Salway and better in quality.
ILLINOIS: White freestone ripening early in July, when there is a dearth of good peaches.
HALFORD NO. 2: Clingstone ripening a few days before Phillips. Has the good quality of the Midsummers and seems to be a more vigorous tree and more productive than Sims or Libbee.

TEN TIMES GUARANTEE

The old motto "Let the buyer beware," has given way in modern merchandising to "Satisfaction guaranteed or your money back." With fruit trees the grower has to wait several years and spend several times the original value of the trees before he knows exactly what he has bought. He is then unable to return the trees, and with the usual nursery disclaimer of "for any error we will not be liable for more than the original purchase price" there is inevitable loss.

To eliminate this risk on the part of the buyer, we undertake on application to guarantee to the extent of TEN TIMES THE PURCHASE PRICE that trees bear true to label. This necessitates greater care and cost in all stages of propagation and going over the trees during the first year in the orchard. The buyer gets the benefit.

This Guarantee alone is worth more than any possible difference in the original price of trees. A profitable orchard is the goal of every planter and it is best insured by planting the best available trees.
